(54) A System for a Billing Process over a Network and a Method thereof.

Abstract

The present invention is related to a system for a billing process over a network and a method thereof. According to one aspect of the present invention, the method for the billing process over the network is a method for processing a billing for a purchase or content from a content provider, if a client accessed over the network requests the content provider of the billing for the purchase or the content selected by the client, the method comprising the steps of: receiving billing request data for a purchase or content selected by a user from a content provider and requesting the content provider of a cyber document including billing information for the purchase or the content; receiving the cyber document from the content provider and processing the billing based on the received cyber document; and transmitting a result of the billing process to the content provider to transmit the process result to the client.

The present invention enables to process the billing only using a web page without directly installing a program for processing the billing within the system.
